Dear Dog Owners,

My name is Lily Paxton, and I'm the town's Pet Program Coordinator. As part of our goal to make the community **[less / more]**¹⁾ dog-friendly, we recently opened a new dog park. The park was designed to provide a(n) **[delightful / unpleasant]**²⁾ experience for both dogs and owners. There are big grassy areas where your dogs can run, jump, and play. We have **[combined / distinct]**³⁾ spaces for small dogs and big dogs, to ensure **[danger / security]**⁴⁾. You'll also find lots of benches and areas for resting and staying **[cool / hot]**⁵⁾. We hope you will have an **[awful / excellent]**⁶⁾ time with your dogs in this newly opened park.

Regards, Lily Paxton, Pet Program Coordinator

Maya waited in line to check in for her flight. Her expectations about her European backpacking trip were really **[high / low]**¹⁾. She had been looking forward to the trip for a year. She couldn't wait to visit museums in Madrid and see the Eiffel Tower at night in Paris. As she stood in line, she could feel those experiences were finally so **[distant / near]**²⁾. When she approached the counter, the airline employee asked to see her passport. Maya reached into her pocket but felt nothing. She realized she had **[brought / left]**³⁾ her passport at home. Her plans were **[restored / spoiled]**⁴⁾. She was **[devastated / joyful]**⁵⁾, knowing she could not board the flight and had to delay her dream trip.

[20번 동반의어를 포함한 어휘 선택]

People often ask me, "What surprises you most about habits?" One thing that continually astonishes me is the degree to which we're influenced by sheer **[ease / inconvenience]**¹⁾. The amount of effort, time, or decision making required by an action has a huge influence on habit formation. To a truly **[extraordinary / ordinary]**²⁾ extent, we're more likely to do something if it's convenient, and less likely if it's not. For this reason, we should pay close attention to the convenience of any activity we want to make into a habit. Putting a wastebasket next to our front door made mail sorting slightly **[handier / more inconvenient]**³⁾, and I stopped procrastinating with this chore. Many people report that they do a much better job of staying **[distant from / near]**⁴⁾ distant family members now that tools like group chats make it **[effortless / difficult]**⁵⁾ to stay in touch.

[21번 동반의어를 포함한 어휘 선택]

It is common sense that people's **[external / internal]**¹⁾ beliefs may drive their **[inner / outer]**²⁾ behavior. If you're attracted to a certain person, you should be more likely to socialize with that person. If you **[dislike / prefer]**³⁾ a brand of toothpaste, you're more likely to buy it. Of course, our internal thoughts don't *always* predict our **[open / private]**⁴⁾ behavior, but, overall, what we do **[clearly / vaguely]**⁵⁾ reflects what we think. But beliefs and behaviors are also related in a more **[extraordinary / ordinary]**⁶⁾ way. It turns out that the arrow is as likely to point in the reverse direction. As social psychologist David Myers observes, "If social psychology has taught us anything during the last 25 years, it is that we are **[likely / unlikely]**⁷⁾ not only to think ourselves into a way of acting but also to act ourselves into a way of thinking."

[22번 동반의어를 포함한 어휘 선택]

Imagine following the spirit of a silence vow into daily life. Challenge yourself to spend an entire day saying only what you **[absolutely / relatively]**¹⁾ must say. It's been widely observed by behavioral psychology experts — and anyone who's ever been on a first date — that we too often tend to treat "conversation" as a game of waiting for our own turn to speak. We miss what's being said because we're **[cognitively / physically]**²⁾ rehearsing our next utterance. What if you could **[include / remove]**³⁾ the idea that the next available mini-silence is your next opening to express whatever is in your head? What if you were **[restricted / unlimited]**⁴⁾ to, say, fifty spoken words tomorrow? I think you'd listen quite differently. You'd attend quite **[carelessly / cautiously]**⁵⁾ to every word you heard. You'd be attuned to what you must respond to. You might discover that the less you say, the more you hear.

[23번 동반의어를 포함한 어휘 선택]

Science is concerned with **[dispersing / gathering]**¹⁾ and understanding observations of the physical world. That understanding alone solves no problems. Individual people have to act on that understanding for it to help solve problems. For instance, science has found that regular exercise can **[increase / reduce]**²⁾ your risk of heart disease. Knowing this fact is **[boring / fascinating]**³⁾, but it will do nothing for your personal health unless you act on it and actually exercise. And that's the hard part. Reading an article about exercise is **[difficult / simple]**⁴⁾. Getting into an actual routine of regular exercise is **[easier / more difficult]**⁵⁾. In this sense, science really solves *no* problems at all. Problems are only solved when people take the knowledge provided by science and use it. In fact, many of humanity's biggest problems are caused by lack of **[action / knowledge]**⁶⁾, and not lack of **[action / knowledge]**⁷⁾.

[24번 동반의어를 포함한 어휘 선택]

We think we're being logical, objective, and rational — and therefore **[inaccurate / precise]**¹⁾ in our analysis, judgment, and decisions. So we think that if other people are logical, objective, and rational, they will agree with us and see what we see. But the opposite is the case. Every human brain is different. Everyone's life experience is different. Everyone's desires and knowledge are different. You might think you're being **[practical / unrealistic]**²⁾ — that is, that your ideas match reality, but that's impossible. It's only your interpretation of reality, which will always be **[distinct from / similar to]**³⁾ someone else's. When two nations play each other in the World Cup, the fans of each country **[blame / praise]**⁴⁾ the referees for missing all the infractions that the other team commits. Without fail, each fan base believes that the referees are **[impartial / prejudiced]**⁵⁾ against their team.

[25번 동반의어를 포함한 어휘 선택]

The graph above shows the online share of retail trade in selected European countries in 2018 and 2019. In 2019, the United Kingdom recorded the highest online share of retail trade, reaching 19.2 percent. The Netherlands showed the largest **[decrease / rise]**¹⁾ in its online share of retail trade among the countries from 2018 to 2019, with a jump of over 6 percentage points. In 2018, Germany had a higher online share of retail trade than the Netherlands, whereas, in 2019, Germany

[lagged behind / overtook]²⁾ the Netherlands. In 2018, Germany's online share of retail trade was less than four times that of Spain. Among the five countries, Italy recorded the lowest online share of retail trade in both 2018 and 2019.

[26번 동반의어를 포함한 어휘 선택]

Edward O. Wilson was born in Birmingham, Alabama, in 1929. In his early childhood, he became **[bored with / interested in]**¹⁾ nature and spent much time in the outdoors. At age seven, he was partially blinded in a fishing accident; his **[decreased / increased]**²⁾ sight led Wilson to the study of ants. He could not observe larger animals from a distance. Instead, he concentrated on smaller creatures he could study **[intimately / remotely]**³⁾. After studying evolutionary biology at the University of Alabama, Wilson **[moved to / remained at]**⁴⁾ Harvard University, where he became a professor in 1956. He never received a Nobel Prize — the prize didn't **[acknowledge / disregard]**⁵⁾ research in the field of evolutionary biology. However, he was awarded the Crafoord Prize in 1990. Wilson, known to some as the "modern-day Darwin", died at the age of 92 in Massachusetts.

[27번 동반의어를 포함한 어휘 선택]**Houseplant Heaven Pop-up Shop**

Enjoy an **[ordinary / unique]**¹⁾ plant shopping experience! Explore beautiful houseplants, and bring some green into your home.

When: October 11 - 13, 10 a.m. - 8 p.m.

Where: Tasty Cup Cafe

Details

- Indoor plants are **[obtainable / unavailable]**²⁾ for purchase.
- If you buy 2 plants, you will get a 50% discount on coffee.

Activities

- Take pictures in a photo zone filled with **[common / distinctive]**³⁾ plants.
- Decorate **[environmentally friendly / environmentally harmful]**⁴⁾ pots made from recycled glass.

※ Outside food and drinks are not allowed.

[28번 동반의어를 포함한 어휘 선택]**2025 Summer Cartoon Festival**

It's the 8th annual Summer Cartoon Festival! The festival **[attracted / repelled]**¹⁾ a lot of visitors last year. Why not be one of them this year?

Dates: July 5 - 6

Time: 9 a.m. - 6 p.m.

Place: Merryville Park

Featured Events

- Cartoon drawing classes for beginners only
- Face painting by cartoonists
- Parade of costumed characters

Notes

- All visitors will **[get / give]**²⁾ character stickers.
- For a more **[elaborate / vague]**³⁾ timetable and other information, check out www.SummerCartoonFest.com.

[29번 동반의어를 포함한 어휘 선택]

Studies of experts provide insight into what it means to have deep and **[inflexible / pliant]**¹⁾ understanding. Experts in a particular domain are people who have deep, richly **[disconnected / interrelated]**²⁾ ideas about the world. They are not just good thinkers or people who are **[extraordinarily / ordinarily]**³⁾ smart. Rather, experts have knowledge in a **[general / particular]**⁴⁾ domain — such as chess, chemistry, or tennis — and are not generalists. However, experts do not just know “a bunch of facts.” In fact, having expertise in a topic means that knowledge is organized into **[consistent / incoherent]**⁵⁾ frameworks, and the expert understands the inter-relationship between facts and can distinguish which ideas are most **[key / secondary]**⁶⁾. This kind of deep but organized understanding allows for greater **[adaptability / inflexibility]**⁷⁾ in learning and **[hinder / promote]**⁸⁾ application across multiple contexts.

[30번 동반의어를 포함한 어휘 선택]

It is **[normal / unnatural]**¹⁾ for people to observe happenings and then seek explanations for why those happenings occurred. But sometimes the reasoning is **[correct / incorrect]**²⁾ because of one or more misconceptions. One of these is the *ecological fallacy*, where an argument claims that there is a **[causal relationship / unrelatedness]**³⁾ between two things merely because they occur together. For example, in the 1950s it was found that crime rates were the highest in neighborhoods where immigrants were **[most abundant / scarcest]**⁴⁾. Some people used this “co-occurrence” to argue that immigrants were a cause of crime. But a careful analysis of this situation **[concealed / disclosed]**⁵⁾ that immigrants were forced to live in neighborhoods where crime rates were already high; they could not afford **[cheaper / more costly]**⁶⁾ housing in **[more dangerous / securer]**⁷⁾ neighborhoods. Immigrants themselves committed very few of the crimes. Unless you analyze the claim **[carelessly / cautiously]**⁸⁾, you would **[misunderstand / understand]**⁹⁾ the relationship and thereby construct a **[flawed / perfect]**¹⁰⁾ belief.

[31번 동반의어를 포함한 어휘 선택]

In everyday life, we use previous experience to predict where we should pay attention. Different environments create different expectations. This was **[deeply / superficially]**¹⁾ illustrated by the scientist Jared Diamond in his book *Guns, Germs, and Steel*. He describes an adventure wandering through the New Guinea jungle with native New Guineans. He relates that these natives tend to perform **[badly / well]**²⁾ at tasks Westerners have been trained to do since childhood. But they are hardly **[foolish / smart]**³⁾. They can detect the most **[delicate / obvious]**⁴⁾ changes in the jungle, good for following the tracks of a predator or for finding the way back home. They know which insects to leave alone, know where food exists, can build and tear down shelters **[easily / with difficulty]**⁵⁾. Diamond, who had never spent time in such places, has no ability to pay attention to these things. Were he to be tested on such tasks, he also would perform poorly.

[32번 동반의어를 포함한 어휘 선택]

Most entrepreneurs put in **[enormous / small]**¹⁾ amounts of time and effort in creating and launching new products and services and then make the mistake of overpricing them. They have created something they care deeply about, it's theirs, and this powerful sense of ownership **[clarifies / twists]**²⁾ their perception of value which causes them to overprice their products. While many of them are **[slow / swift]**³⁾ to realize that their initial prices are too high, not all these people are happy or willing to drop their prices to make their products more **[appealing / unattractive]**⁴⁾. And this can be a very costly mistake that may lead to the failure of their new business. When you launch a new product or service, your priority should be to get **[enough / insufficient]**⁵⁾ market adoption as soon as possible and you should be ready to **[give up / raise]**⁶⁾ your initial prices and profits to achieve this aim. Once you have strong sales volumes, you can **[lower / raise]**⁷⁾ your prices to **[maximize / minimize]**⁸⁾ your profits.

[33번 동반의어를 포함한 어휘 선택]

In most respects, humans are one of a relatively **[large / small]**¹⁾ number of species that evolved a very different strategy of investing more energy to reproduce more **[quickly / tardily]**²⁾. Like apes and elephants, we mature at a(n) **[hurried / unhurried]**³⁾ pace, grow large bodies, and have few babies but devote much time and energy to raising them well. This **[common / uncommon]**⁴⁾ strategy **[fails / succeeds]**⁵⁾ because while apes and elephants produce fewer babies than mice, a larger percentage of their offspring survive to then reproduce. A house mouse can become a mother when she is just five weeks old, has four to ten pups per litter, and can have a new litter every two months over the course of her **[exactly / roughly]**⁶⁾ twelve-month life. However, the vast majority of her pups die **[immature / old]**⁷⁾. In contrast, a chimp or elephant mother does not reproduce until she is at least twelve years old, and she gives birth to only one infant every five or six years over the next thirty or so years. About half of these offspring make it to becoming parents.

[34번 동반의어를 포함한 어휘 선택]

When scientists make an important new discovery or experimentally prove some hypothesis, they do not, **[generally / specifically]**¹⁾, keep that information to themselves so that they alone can consider its meaning and derive additional theories from it. Instead, they publish their results and make their data **[accessible / unavailable]**²⁾ for inspection. This makes it possible for other scientists to reconsider their data and possibly **[challenge / support]**³⁾ their conclusions. More important, though, it makes it possible for other scientists to use that data to construct new hypotheses and perform new experiments. The assumption is that society as a whole will end up knowing more if information is spread as **[broadly / restrictedly]**⁴⁾ as possible, rather than being limited to a few people. In a **[loose / rigid]**⁵⁾ sense, every scientist depends on the work of other scientists.

[35번 동반의어를 포함한 어휘 선택] * 반드시 본문 내용을 이해 후 문제를 풀 것(본문대로 답할 것)

In the 1930s, the British psychologist Sir Frederic Bartlett asked people to listen to folktales from other countries and then **[forget / recollect]**¹⁾ these stories at a later date. As you might guess, **[familiar / strange]**²⁾ stories were not remembered as well as **[unfamiliar / well-known]**³⁾ stories. Surprisingly, however, errors in memory were not **[arbitrary / orderly]**⁴⁾. Rather, subjects often rewrote **[analogous / dissimilar]**⁵⁾ parts of the stories in their own minds — particularly the parts that made the least sense to them. Bartlett concluded that when facing problems, humans draw upon **[mental / physical]**⁶⁾ schemata, or shelves of stored knowledge in our brains, to fill in any **[insignificant / major]**⁷⁾ gaps in our memories. Therefore, remembering is a(n) **[creative / unimaginative]**⁸⁾ process that involves building upon past experiences.

[36번 동반의어를 포함한 어휘 선택]

History, people often say, repeats itself. And looking at the historical records of the ancient civilizations, some things do seem to happen again and again. Civilizations expand, get **[contracted / overreached]**¹⁾, and then **[fall apart / thrive]**²⁾ as in the cases of Rome, which went under in 476 AD, and the British Empire, which **[disintegrated / integrated]**³⁾ more than a thousand years later in the post-World War II era. But is this always the case? If so, archaeology would be pretty **[exciting / tedious]**⁴⁾; one thing would happen again and again. But that's not what archaeologists see. Some civilizations end **[abruptly / slowly]**⁵⁾, like the Aztec and Inca, conquered by invaders in the 1520s AD. Those empires never had the chance to collapse as a result of overexpansion. So in the case of civilizations, "history repeats itself" seems to be an oversimplification.

[37번 동반의어를 포함한 어휘 선택]

Stanford psychology professor Dr. Carol Dweck is the internationally recognized pioneer of the concept of "growth mindset" as a way to **[constantly / intermittently]**¹⁾ grow, learn, and persevere in our efforts. Dweck found that kids who are told they're "smart" actually **[do poorly / outperform]**²⁾ in future tasks, by choosing **[more difficult / more effortless]**³⁾ tasks to **[confront / evade]**⁴⁾ evidence that they are not smart, which Dweck calls having a "fixed mindset." In contrast, Dweck found, kids who are praised not for their smarts but for their effort **[foster / hinder]**⁵⁾ what Dweck calls a "growth mindset." They learn that their effort is what led to their success, and if they continue to try, over time they'll **[enhance / worsen]**⁶⁾ and achieve more things. These kids end up taking on **[easier / more difficult]**⁷⁾ things, and feel better about themselves. "[Downplaying / Stressing]"⁸⁾ effort gives a child a variable that they can control," Dweck has explained.

[38번 동반의어를 포함한 어휘 선택]

To monitor our surroundings is to focus on what's outside of ourselves: what we see, hear, smell, feel, and perhaps even taste. But sometimes what really marks a place is something less **[particular / vague]**¹⁾ — a *feeling* within us. An interesting example **[appeared / disappeared]**²⁾ from a study of subway passenger behavior. Researchers trying to understand why people sit where they sit or stand where they stand in subway and metro trains examined the factors that shape the way riders used and navigated that space in **[diverse / similar]**³⁾ situations. One of their findings involved the reasons many riders like to plant themselves **[adjacent to / far from]**⁴⁾ the train's doors. Partly this was the **[apparent / obscure]**⁵⁾ convenience of being able to exit more quickly. But it was shaped partly by a more **[abstract / concrete]**⁶⁾ sensation — the desire to avoid the sometimes **[comfortable / uneasy]**⁷⁾ feeling of accidentally making eye contact with seated passengers. We can't see feelings — but they're very **[fake / genuine]**⁸⁾, and they influence our experience of the world.

[39번 동반의어를 포함한 어휘 선택]

We have a 'diving reflex', like other marine mammals. This means that **[distinctive / ordinary]**¹⁾ nerve endings on our faces, around the mouth and nose, **[activate / suppress]**²⁾ this reflex only when the facial region goes under water. If we are in the water, with our head out in the air, there is no diving reflex. But if we sink just our face in a bowl of water, while the whole of the rest of our body is in the dry air, the diving reflex is triggered. It automatically closes down the airway, **[increasing / lowering]**³⁾ the risk of swallowing water, and it **[constricts / widens]**⁴⁾ the small air-passages in the lungs. At the same time the heart rate is **[accelerated / decelerated]**⁵⁾ to half speed and blood is shunted to the vital organs, protecting them from the effects of the **[long / short]**⁶⁾ stop in breathing. By contrast, if a chimpanzee or a gorilla found itself in water with its face below the surface, it would **[become alarmed / calm down]**⁷⁾, its heart would race and it would quickly drown.

[40번 동반의어를 포함한 어휘 선택]

There is a(n) **[natural / unnatural]**¹⁾ assumption of truth, or a truth bias when humans communicate with one another. In other words, when we're listening to others or reading their words, our automatic assumption is that the other person is telling the **[falsehood / truth]**²⁾. This usually works out fine. If you ask someone where the restroom is located or if it's raining outside, you can **[securely / unsafely]**³⁾ assume that most people will not lie in their responses. Imagine how **[easy / hard]**⁴⁾ it would be to converse with someone if you assumed that *everything* they were telling you was **[true / untrue]**⁵⁾! Indeed, questioning the truth of a statement and then choosing not to believe it requires additional **[physical / mental]**⁶⁾ steps. For the most part, humans are "cognitive misers," which means we typically don't expend more mental effort than seems necessary in a given situation. It makes sense then, that when we see something online, even if it is fake, our default is to **[doubt / trust]**⁷⁾ it, at least at first.

[41~42번 동반의어를 포함한 어휘 선택]

Paying with plastic fundamentally changes the way we spend money, **[changing / maintaining]**¹⁾ the calculus of our financial decisions. When you buy something with cash, the purchase involves an actual **[deficit / gain]**²⁾ — your wallet is literally **[heavier / lighter]**³⁾. Credit cards, however, make the purchase **[concrete / intangible]**⁴⁾, so that you don't really feel the **[advantage / disadvantage]**⁵⁾ of spending money. Brain-imaging experiments suggest that paying with credit cards actually **[decreases / increases]**⁶⁾ activity in the insula, a brain region associated with **[negative / positive]**⁷⁾ feelings. As George Lowenstein, a neuroeconomist at Carnegie Mellon, says, "The nature of credit cards ensures that your brain is **[numbed / sensitized]**⁸⁾ against the pain of payment." Spending money doesn't feel bad, so you spend more money.

Consider this experiment: Drazen Prelec and Duncan Simester, two business professors at MIT, organized a real-life, sealed-bid auction for tickets to a Boston Celtics game. Half the participants in the auction were informed that they had to pay with cash; the other half were told they had to pay with credit cards. Prelec and Simester then averaged the bids for the two **[different / same]**⁹⁾ groups. It turns out that the average credit card bid was *twice* as **[high / low]**¹⁰⁾ as the average cash bid. When people used their credit cards, their bids were much more careless. They no longer felt the need to **[increase / restrict]**¹¹⁾ their expenses.

[43~45번 동반의어를 포함한 어휘 선택]

The sun shone in the cloudless sky as Becky, a retired teacher, walked to the fruit market. Across town, Dana was riding a bus towards the museum for a job interview. Just before reaching her stop, Dana noticed the sky had **[abruptly / slowly]**¹⁾ darkened. Her heart sank — she had no umbrella. As she stepped off the bus next to the market, where Becky had just finished shopping, raindrops began to fall. Dana felt **[fear / serenity]**²⁾. She didn't want to show up to her interview soaked. She looked around but couldn't find any stores nearby to buy an umbrella, and she didn't have time to search around. Just then, Becky approached her, holding an open umbrella in one hand and a closed one in the other. "Take this" she said with a smile. Dana's eyes **[broadened / narrowed]**³⁾. "Are you sure?" Becky nodded. "I always carry an extra on rainy days." Dana thanked her, took the umbrella, and opened it. She saw a small card tied to the handle. It read: "Cover each other." She was touched by the message. She hurried to the museum, arriving dry and **[cozy / uncomfortable]**⁴⁾, and performed well in her interview. The Museum CEO was impressed by Dana and offered her the Event Manager position, her dream job. Throughout the years ahead, she often thought back to Becky's kind gesture. Inspired by the memory, Dana created a museum event called "Cover Each Other" with paintings of people **[assisting / obstructing]**⁵⁾ others. She donated half of the money from ticket sales to families who lost their homes to natural disasters. Dana kept Becky's message framed in her office as a reminder that one kind gesture could change someone's life. The kindness of one stranger had shaped her path, and she made sure it continued to shape the world.
